

## INTEGRAL LIGHTING CONTROLS

Featured Control: LMFC-011 Digital On/Off/0-10 Volt Dimming Luminaire Controller by Wattstopper

### Introduction to LMFC-011:

Mercury Lighting is now featuring the Legrand Wattstopper LMFC-011 luminaire-mounted lighting controller, in a selection of LED recessed and surface mounted series. (See availability matrix).

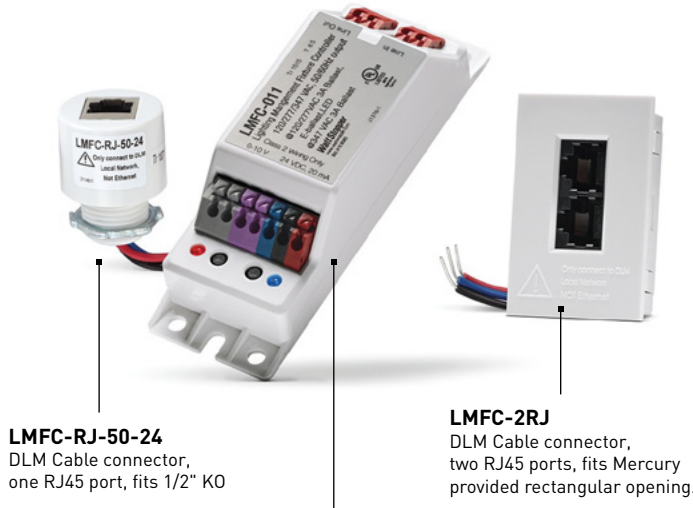

Integrates easily with a 0-10V dimmable LED driver. This small controller mounts discretely inside the luminaire to give it connectivity to a Digital Lighting Management (DLM) system. Connects to the DLM local network with a luminaire-mounted single- or dual-port RJ45 cable connector. (LMFC-RJ-50-24 or LMFC-2RJ).

- Allows Mercury Lighting Luminaires to connect to an advance DLM system. Total lighting control possible with both a cost effective and easy set-up reality.
- Ideal solution for intelligent control and performance of Mercury Lighting's state-of-the-art LED luminaires.
- Combines occupancy sensing and daylight harvesting in a locally controlled network.
- Applications include typical indoor environments; open or private offices, conference rooms, classrooms, corridors, etc.
- Ideal for energy-savings and code-compliance strategies.

### Full Features of LMFC-011 and Wattstopper DLM system:

<http://www.wattstopper.com/solutions/fixture-integrated.aspx>

**LMFC-RJ-50-24**  
DLM Cable connector,  
one RJ45 port, fits 1/2" KO

**LMFC-2RJ**  
DLM Cable connector,  
two RJ45 ports, fits Mercury  
provided rectangular opening.

**LMFC-011**  
0-10V dimming luminaire  
controller, mounts internally.
